1.0 GLOSSARY

- 1.1 The terms used in this document may be found in the document SRSP Glossary which can be downloaded from SKMM website.
(http://www.skmm.gov.my/what_we_do/spectrum/srsp.asp)

REQUIREMENTS FOR DIGITAL TRUNKED RADIO SYSTEMS (DTRS) OPERATING IN THE FREQUENCY BAND 410 MHz TO 430 MHz

2.0 INTENT

- 2.1 This Standard Radio System Plan (SRSP) states the requirements for the utilisation of the frequency band between 410 MHz to 430 MHz for Digital Trunked Radio Systems, (DTRS) in Malaysia.
- 2.2 Digital Trunked Radio Systems (DTRS) are two-way mobile radio systems that consist of multiple-channel repeater stations and their control stations, serving a number of base and mobile terminals. Trunking is the pooling of radio channels or resources of a DTRS, whereby users have automatic access to all channels of the system. DTRS also have roaming capabilities and permit Direct Mode Operation between mobile terminals.
- 2.3 The intended services include transmission of voice, data, image, paging, short messaging, facsimile and PSTN/Mobile cellular interconnection for trunked radio users.
- 2.4 In general, a SRSP is a document designed to provide information on the minimum requirements in the use of a frequency band as described in the Spectrum Plan (see **Appendix A**). It provides information on technical characteristics of radio systems, frequency channelling, coordination initiatives in order to maximise the utilisation, minimise interference and optimise the usage of the band. It is intended to regulate the usage of spectrum and does not attempt to establish any detailed equipment standards.

3.0 GENERAL

- 3.1 Technical characteristics of equipment used in such systems shall conform to all applicable Malaysian standards, international standards, International Telecommunications Union (ITU) and its radio regulations as agreed and adopted by Malaysia.
- 3.2 All installations must comply with safety rules as specified in applicable standards.
- 3.3 The equipment used shall be certified under the Communications and Multimedia (Technical Standards) Regulations 2000.
- 3.4 The assignment, allocation and allotment of this frequency band and the information in this SRSP are subject to review from time to time to reflect new developments in the communications and multimedia industry.
- 3.5 Leased Channel Systems in Malaysia operate in the 200 MHz and 400 MHz frequency bands and analogue trunked radio service operate in the 800 MHz

frequency band. These systems are gradually being replaced by the more spectrally and functionally efficient Digital Trunked Radio Systems.

- 3.6 The following is an overview of some DTRS technologies in the industry:

3.6.1 TETRA

TETRA (Terrestrial Trunked Radio) is a standard developed by the European Telecommunications Standards Institute (ETSI). The purpose of the TETRA standard is to meet the needs of various Professional Mobile Radio (PMR) user organizations. The first version of TETRA standard was published in 1995.

TETRA is based on a 4-slot TDMA (Time Division Multiple Access) with 25 KHz physical radio channel bandwidth. TETRA standard supports trunking mode and IP-based TETRA solutions are available.

Recently, ETSI has completed works on TETRA 2 as the enhancement of the current TETRA standard. The enhancement is expected to improve TETRA in data speed and TETRA voice codec.

3.6.2 APCO-P25

APCO-P25 (Association of Public-Safety Communications Officials – Project 25) is a common standard for Digital Trunked Radio Systems used by public safety agencies in North America to enable them to communicate with other agencies and mutual aid response teams in emergencies.

APCO-P25 is based on FDMA (Frequency Division Multiple Access) capable of operating in 12.5 KHz and/or 25 KHz physical radio channel bandwidth. This standard allows backward compatibility with analogue systems and supports both trunked and conventional operation model. IP based APCO-P25 solutions are also available.

APCO-P25 Phase 2

The current APCO-P25 standard (also known as APCO-P25 Phase 1) is further improved with the development of APCO-P25 Phase 2. As part of APCO-P25 Phase 2, works to further improve spectrum efficiency on 2-slot TDMA within 12.5 KHz FDMA are ongoing.

The APCO-P25 Phase2 equipment is expected be backward compatible with the existing APCO-P25 Phase 1.

3.6.3 NXDN

NXDN is a digital air interface protocol for mobile communication. It was developed jointly by Icom Incorporated and Kenwood Corporation. This standard is based on FDMA (Frequency Division Multiple Access) and defines both trunked and conventional modes of operation.

NXDN is a digital radio communications protocol using 4-Level FSK (4LFSK) modulation capable of fitting into both 12.5 kHz and 6.25 kHz physical radio channel bandwidth (9600 bps and 4800 bps respectively).

3.6.4 DMR

DMR (Digital Mobile Radio) is a standard developed by the European Telecommunications Standards Institute (ETSI) under its Electromagnetic compatibility and Radio spectrum Matters (ERM). The standard (ETSI TS 102 361) is based on a two-slot TDMA protocol. DMR applies TDMA method of spectral efficiency of where 12.5 kHz channel will be divided into two equivalent time slots. The DMR design is capable to support trunked radio networks range from 12.5 kHz physical radio channel to wide area systems incorporating multiple physical radio channels extended over many radio sites. It provides a migration path from analogue to digital with its ability to operate in both analogue and digital mode.

4.0 CHANNELLING PLAN

- 4.1 The SRSP defines the frequency bands 410 to 430 MHz providing a total bandwidth of 20MHz for Digital Trunked Radio Systems (DTRS). The 12.5 kHz channelling plan is the standard channelling plan for this band giving a total of 800 physical radio channels (or equivalent TRS analogue traffic channel of 1600 noting possibility of two time slots per physical channel)
- 4.2 Although the standard channel spacing is 12.5 kHz, it provides flexibility to operate two contiguous channels (i.e. 2 x 12.5 kHz) if needed. SKMM shall assign a single channel based on channel spacing 12.5 kHz or combination of multiple channels of 12.5 kHz channel spacing as was developed in the channelling plan as in **Appendix B**.
- 4.3 The channel arrangements are divided into 4 pairs of frequency blocks (blocks A/A', blocks B/B', blocks C/C', and blocks D/D') with transmit/receive separation of 10MHz.
- 4.4 Channels shall be allotted according to the channel allotment plan in **Appendix C**. Assignment of channels for areas of operation near the borders with Brunei, Singapore and Thailand will be based on the regional frequency blocks allotted.
- 4.5 The channel allotment plan is designed to minimise inter-modulation and frequency interference problems by assigning co-sited channels that are 250 kHz apart. The frequency blocks A, B, C and D, which contain 200 channels each, are divided into ten (10) channel groups (i.e. A01-A10, B01-B10, C01-C10 and D01-D10) respectively.
- 4.6 Channels are assigned based on the three defined geographic area as in Appendix F (Sabah or Sarawak or Peninsular Malaysia). Co-location assignments will be by

channel groups (or part thereof) up to a maximum of twenty (20) channels within the same channel group per DTRS base/repeater station. The number of channels/channel groups assigned will be based on the service requirement of the operator justified based among others on the area covered, grade of service (GOS), capacity and services provided.

5.0 REQUIREMENTS FOR USAGE OF SPECTRUM

- 5.1 This SRSP covers the minimum key characteristics considered necessary in order to make the best use of the available frequency band.
- 5.2 Capacity enhancing techniques are continually being developed. This SRSP allows for adoption of such techniques for more efficient use of spectrum, without reducing quality of service. Good cell-planning practice and frequency reuse should be adopted to maximise spectrum usage.
- 5.3 Channel loading of DTRS should be such that maximum use is made of the available spectrum while providing reasonable grade of service. This SRSP requires the loading of public and private systems to provide a Grade of Service (GOS) of at least five percent (5%).
- 5.4 SKMM will use the Erlang C model as a guide to assess the channel needs of the applicant. This model is adopted as the reference as it assumes that the system will queue a certain number of blocked calls. The Grade of Service will be defined by a specified delay, in message lengths, such that calls delayed will not exceed the specified delay with a probability $P(t)$ of 0.05 (5%). That is, 95% of the calls placed will not be delayed by greater than the specified delay. An Erlang C table is provided in **Appendix D** for reference.
- 5.5 Users shall note the possibility of interference to Active Medical Implant equipment operating in the band 402 MHz to 405 MHz and Radio Frequency Identification Device (RFID) in the band 433 MHz to 435 MHz and shall take additional precautionary measures when operating in close proximity to such devices/equipment.
- 5.6 The allocations of spectrum and shared services within these bands are found in an extract from the Spectrum Plan as shown in **Appendix A**.

6.0 PRINCIPLES OF ASSIGNMENT

- 6.1 Authorization to use the DTRS spectrum for the base/repeater station apparatus is by way of **Apparatus Assignment (AA)** and the **trunked radio access device** is by way of **Class assignment (CA)**. Please refer to www.skmm.gov.my for the condition of use in the Notification of Issuance of Class Assignment for the trunked radio access device.
- 6.2 Eligible persons who may apply for assignments are:

6.2.1 Spectrum Blocks A , B and C

6.2.1.1 Network Facilities Provider Individual (NFP(I)) licence that provides radiocommunication transmitters and links (Note: Priority on the usage of these blocks are for migration of the current analogue service providers listed in **Appendix E**).

6.2.1.2 The applicant shall:

6.2.1.2.1 submit a Detailed Business Plan based on wholesale model and defined geographic area (**Appendix G**) including details of the roll out and digital migration plan acceptable by the Commission;

6.2.1.2.2 upon the approval of the Detailed Business Plan by the Commission, submit application for AA in accordance with the geographic region/s specified in the Detailed Business Plan; and

6.2.1.2.3 prior to the issuance of the AA, provide to the Commission an Irrevocable Bank Guarantee to guarantee performance and compliance with the conditions of the AA and the Detailed Business Plan, payable on demand, either in part or in full, for the amount of RM 50,000 (Ringgit Malaysia Fifty Thousand) per defined geographic area from a licensed financial institution in Malaysia in the form and substance agreed by the Commission, which shall be valid for the period of the AA.

6.2.1.3 The finalised size of spectrum made available on the geographic region basis to the applicant shall be based on the principle of:

6.2.1.3.1 the percentage total of analogue TRS AA held as in **Appendix E**;

6.2.1.3.2 the needs of the technology of choice; and

6.2.1.3.3 spectrum allocation efficiency.

6.2.1.4 The application for AA shall be based on the committed roll out plan as specified in the Detailed Business Plan. For spectrum which are available or not utilised or under utilised or not covered by the roll out plan, SKMM may allow other NFP(I) licensees to apply for an AA.

6.2.1.5 AA issued to successful applicant shall be subject to further additional conditions specified in **Appendix F**.

6.2.2 Block D

6.2.2.1 Private network facility (Private corporation/companies) for own offshore/inland private use only and government [Note: This is set aside for migration of existing private networks and government users in the 800 MHz as well as for new users].

- 6.3 Applicants are required to submit AA applications for the apparatus on the prescribed AA forms.
- 6.4 The AA for these bands shall be valid for a period of five (5) years or such lesser period as specified in the AA. AA holders may re-apply for a new assignment at least sixty (60) days before the expiry date.
- 6.5 Issuance of an AA is also subject to successful co-ordination among assigned stations and with neighbouring administrations where it applies.
- 6.6 Other than the spectrum blocks/channel groups reserved for migration, the AA be on a first come first served basis. In the event of unavailability of spectrum, applicants will be placed in the queue that will be reviewed periodically.
- 6.7 To further facilitate planning and efficiency in spectrum management, upon successful application the NFP(I) licence holder shall be allocated with the specific spectrum channel group(s) (Appendix C) in the defined geographic area as in **Appendix G** of this document. Such arrangements are only for administrative or spectrum management purposes in order to facilitate the NFP(I) licensees in their roll out planning in the defined geographic region.

7.0 IMPLEMENTATION

- 7.1 This SRSP shall be effective from the date of issuance of this document.
- 7.2 The reservation of the spectrum blocks for the migration of the listed operators in **Appendix E** and TRS users in Block C of the 800 MHz band will be upheld up to December 2015. The unused blocks shall be opened to others on a first come first served basis.

8.0 CO-ORDINATION REQUIREMENT

- 8.1 Use of these frequency bands shall require coordination with the neighbouring countries within the following coordination zones:
 - 8.1.1 Within 50 kilometers of Malaysian border with FACSMAB (Frequency Assignment Committee of Singapore, Malaysia and Brunei Darussalam) member countries; and
 - 8.1.2 Within 30 kilometers of the Malaysian border with Thailand.
- 8.2 The sharing in the use of the frequency 410 – 430 MHz between Brunei Darussalam, Malaysia, Singapore and Thailand for DTRS at the common border areas has been agreed as shown in Appendix H and I.

- 8.3 In the event of any interference, SKMM will require affected users to carry out an operator-to-operator coordination. In the event that the interference remained unresolved after 24 hours by the operators, the affected parties may escalate the matter to SKMM for a resolution. SKMM will decide the necessary modifications and schedule of modifications to resolve the dispute. SKMM will be guided by the interference resolution process as shown in **Appendix J**.

9.0 REVOCATION

- 9.1 Not applicable

APPENDIX A: SPECTRUM PLAN 410 MHz TO 430 MHz

Frequency Band (MHz)	ITU Allocations			Malaysian Allocations
	Region 1	Region 2	Region 3	
410-420	FIXED MOBILE except aeronautical mobile SPACE RESEARCH (space-to-space) 5.268			FIXED MOBILE except aeronautical mobile MLA37 SPACE RESEARCH (space-to-space) 5.268 MLA3
420-430	FIXED MOBILE except aeronautical mobile Radiolocation 5.269 5.270 5.271			FIXED MOBILE except Aeronauticalmobile MLA37 Radiolocation MLA3

5.268 Use of the band 410-420 MHz by the space research service is limited to communications within 5 km of an orbiting, manned space vehicle. The power flux-density at the surface of the Earth produced by emissions from extra-vehicular activities shall not exceed $-153 \text{ dB(W/m}^2\text{)}$ for $0^\circ \leq \delta \leq 5^\circ$, $-153 + 0.077 (\delta - 5) \text{ dB(W/m}^2\text{)}$ for $5^\circ \leq \delta \leq 70^\circ$ and $-148 \text{ dB(W/m}^2\text{)}$ for $70^\circ \leq \delta \leq 90^\circ$, where δ is the angle of arrival of the radio-frequency wave and the reference bandwidth is 4 kHz. No. 4.10 does not apply to extra-vehicular activities. In this frequency band the space research (space-to-space) service shall not claim protection from, nor constrain the use and development of, stations of the fixed and mobile services. (WRC-97)

5.269 *Different category of service:* in Australia, the United States, India, Japan and the United Kingdom, the allocation of the bands 420-430 MHz and 440-450 MHz to the radiolocation service is on a primary basis (see No. 5.33).

5.270 *Additional allocation:* in Australia, the United States, Jamaica and the Philippines, the bands 420-430 MHz and 440-450 MHz are also allocated to the amateur service on a secondary basis.

5.271 *Additional allocation:* in Belarus, China, India, Kyrgyzstan and Turkmenistan, the band 420-460 MHz is also allocated to the aeronautical radionavigation service (radio altimeters) on a secondary basis. (WRC-07)

APPENDIX F:

CONDITIONS OF AA

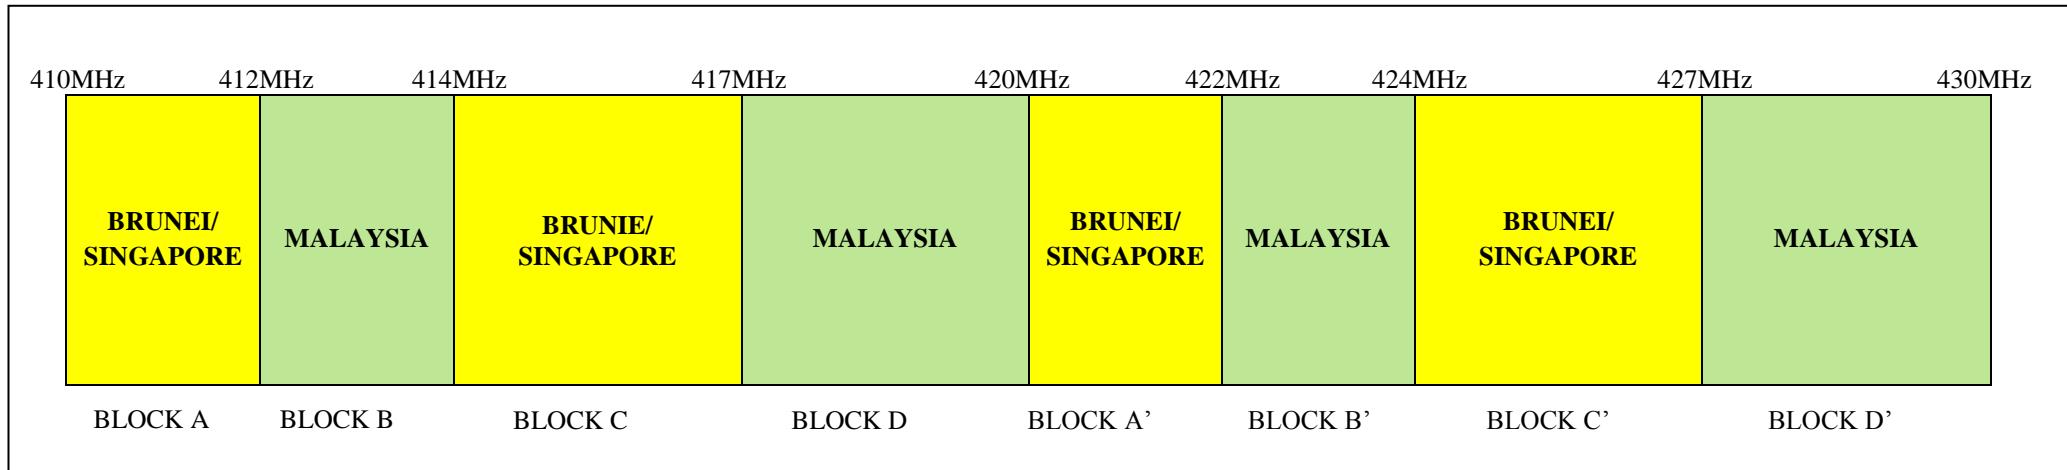

The issuance of the AA in the frequency bands in Blocks A, B and C shall be subject to the following conditions:

- (a) that the AA issued shall be cancelled upon the cancellation of the Network Facility Provider Individual Licence of the AA holder;
- (b) that the AA issued shall be suspended upon the suspension of the Network Facility Provider Individual Licence of the AA holder;
- (c) that AA holder shall comply with the Detailed Business Plan submitted to the Commission *in toto* unless modified with the approval of the Commission;
- (d) that there shall be no change in the shareholding of Network Facility Provider Individual Licence holder for a period of five years from the date of issuance of the first AA to the licensee;
- (e) that Network Facility Provider Individual Licence holder shall submit a half yearly report to the Commission outlining the steps taken to implement the Detailed Business Plan as at **30 June and 31 December** of each year;
- (f) that the performance bond submitted to the Commission shall be valid for the period of the AA; and
- (g) that the Commission is entitled to call on the guarantee provided pursuant to paragraph 6.2.1.2.3 of the SKMM SRSP-537 by the AA holder in the event of non-compliance of the terms and conditions of the AA. The right of the Commission to call on the guarantee is without prejudice to its right to take relevant action against the AA holder under the Act and subsidiary legislation made under it.

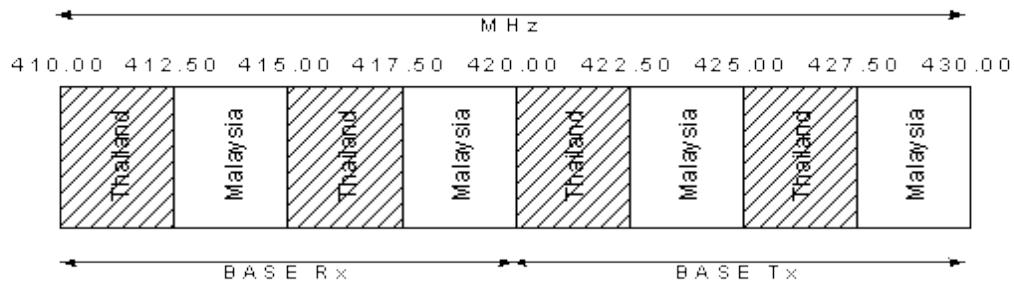

APPENDIX G: DEFINED GEOGRAPHIC AREA

Area	Geographic Blocks
1	Peninsular Malaysia
2	Sabah and Wilayah Persekutuan Labuan
3	Sarawak

APPENDIX H: SPECTRUM ALLOCATION FOR DIGITAL TRUNKED RADIO (MALAYSIA /BRUNEI/SINGAPORE)

APPENDIX I: SPECTRUM ALLOCATION FOR DIGITAL TRUNKED RADIO (MALAYSIA /THAILAND)

Maximum permissible level of interference agreed with Thailand for UHF PMR services:

1. Signal strength of -85 dBm; measured at 5 km from the border at 1.5 m above the ground level
2. C/I value of 18 dB

APPENDIX J: INTERFERENCE RESOLUTION PROCESS

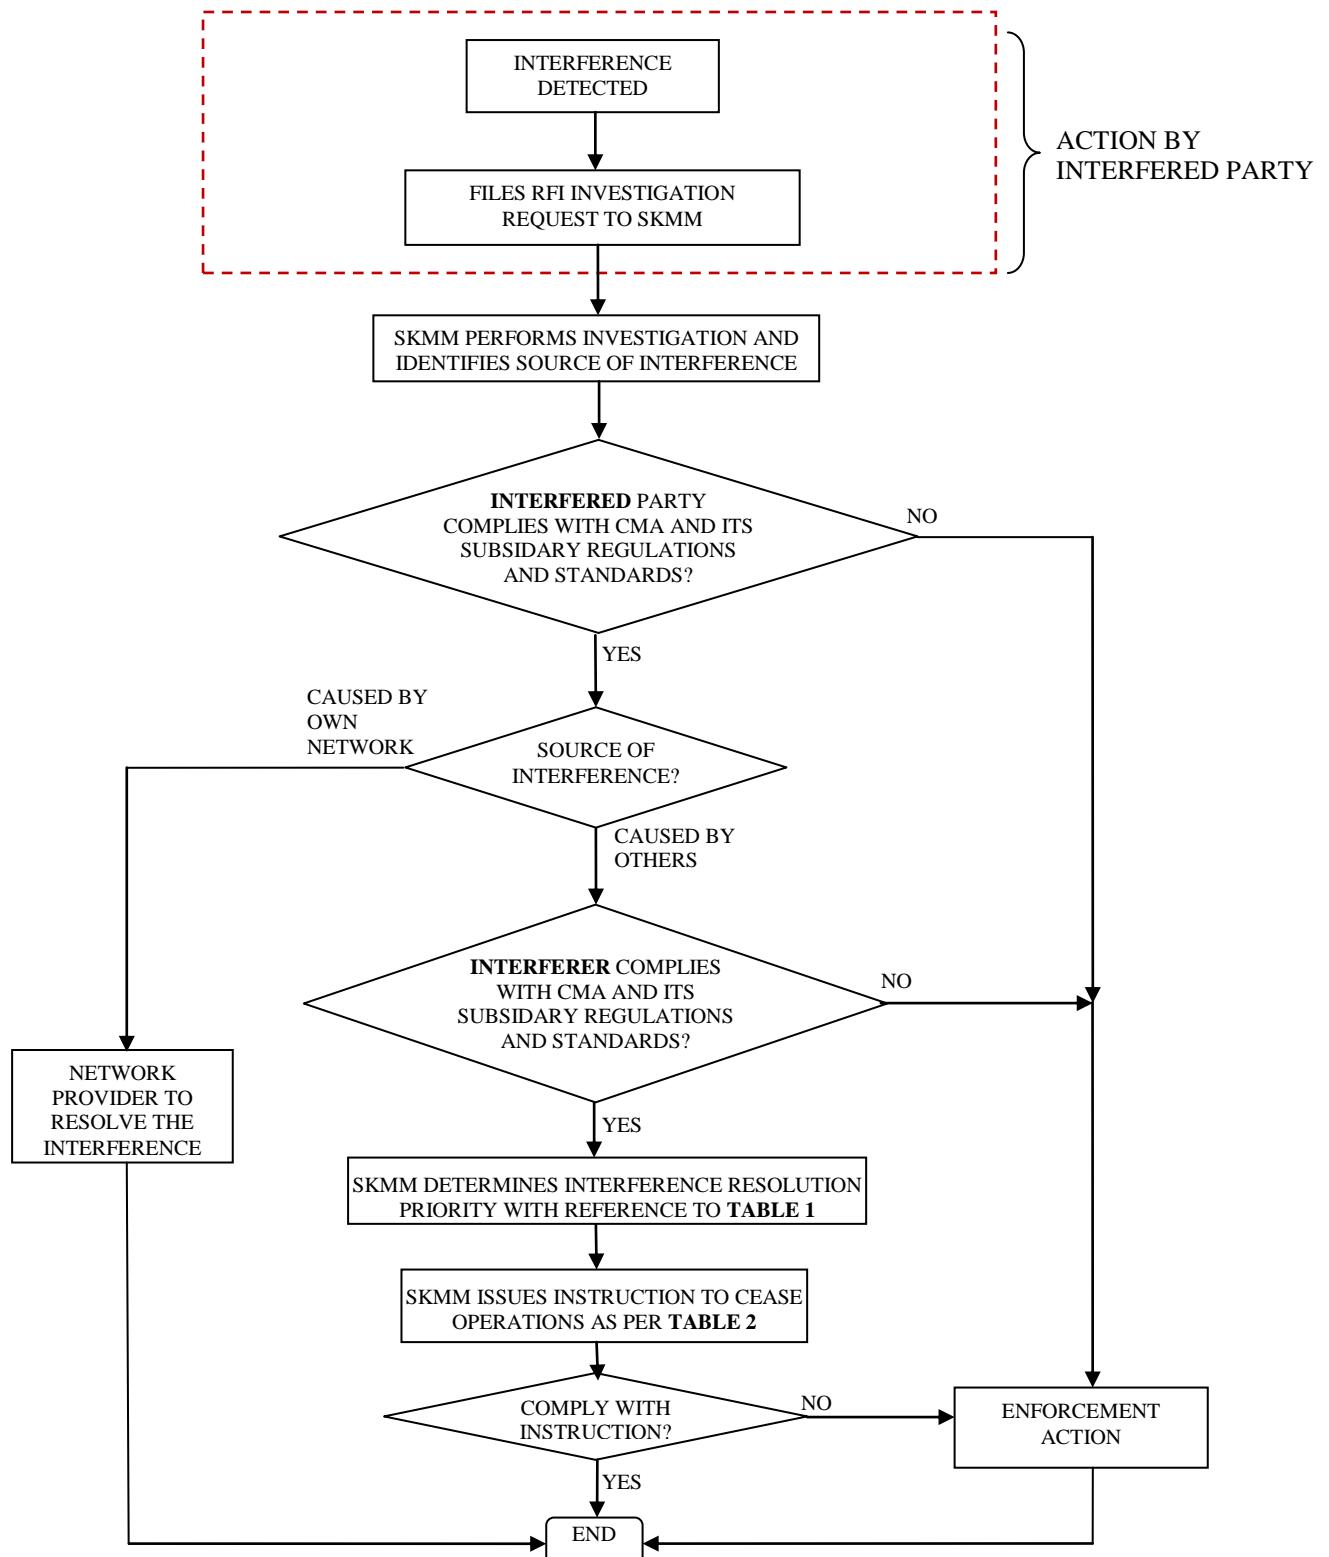

TABLE 1: INTERFERENCE RESOLUTION PRIORITY

Resolution Type of Priority		Description
1	Service Priority	Primary has priority over secondary services. Among co-primary or co-secondary services, the stated priority is accorded as in the Spectrum Plan
2	Assignment Type Priority	Spectrum Assignment (SA) and Apparatus Assignment (AA) have equal priority but are of higher priority than Class Assignment (CA)
3	Service Type Priority	In the event where service priority and assignment type priority are equal for affected parties, the following list will determine the priority level for the interference case (the earlier in the list is given higher priority): <ol style="list-style-type: none"> i. Safety or Radionavigation service; ii. Based on the Date of Apparatus Assignment - Priority is given to the earliest/first installation

TABLE 2: INTERFERENCE RESOLUTION TIMELINE TO PARTIES

	Types of interference	Description	Resolution Timeline
1	Harmful	Interference which endangers or seriously degrades, obstructs or repeatedly interrupts the functioning of a radionavigation service or one or more safety services operating in accordance with CMA (Spectrum) Regulations 2000	To cease* operation immediately within 24 hours or earlier as specified in the notice issued by SKMM
2	Major	Electromagnetic interference rendering any apparatus or services unsuitable for their intended purpose. For this purpose interference to public correspondence service is considered under this category	To cease* operation within 3 days or earlier as specified in notice issued by SKMM if interference cannot be resolved.
3	Minor	Electromagnetic interference which does not affect the overall operation of any radiocommunications transmission.	To cease* operation within 7 days or earlier as specified in the notice issued by SKMM if interference cannot be resolved

*Note:

Resumption of operation of the apparatus is not allowed unless the assignment holder submit interference resolution or mitigation plan and complete implementation of the mitigation plan to the satisfaction of SKMM to remove/ avoid the interference.
